Change Healthcare / PDX

Support Developer Analyst, Mar 2019 - Jan 2022

- Triaged and assisted in identifying root cause in non-production and production environments to align with customer expectations for EPS and Central Service related issues.
- Identified and wrote SQL commands to collaborate with Dev team in identifying impacted data for environment and code related issues experienced in non-production environments.
- Reproduced and documented defect scenarios in QA environments by sending Soap UI messages, tailing logs, and processing tasks in EPS workflow.
- Monitored and updated Jira defects with productive and concise comments to maintain clear communication between on-shore and offshore teams.
- Attended and led meetings between dev team and customer to discuss live triage, releases, patch deliverables and code reviews to align with the project’s Agile framework.

Spring and Maven Projects

- Collaborated in the front end and back end of multiple systems to store, delete and remove user information from different database web applications using Spring MVC.
- Implemented controllers to update SQL databases using JDBC.
- Created a web page designs to display information using HTML and CSS.

Mobile Applications

- Built Multiple Android Applications such as an interface for a laundry service that will send notifications when laundry is finished in a public laundromat.
- Group Messaging android application that will send and receive messages over a local wi-fi connection.
